Dear miss H. Morgan

I am writing to inform you about climate change. And how it's affecting our area and the world. Climate change is a massive problem affecting certain things like weather, species, and habitat. even though Shropshire isn't that big we can play our part to help with climate change.

Animals

The world is full of beautiful animals. Sadly 260 species die every day of pollution poaching and hunting these animal species keep dropping and rising. They have risen because of help they are kept in massive zoo's like Chester Zoo Welsh Mountain Zoo and the Australian Zoo you can visit your favourite animals in these zoo's!

Weather

The world is home to 7 continents Asia, Europe South America and more. Certain countries are poor to be certain climates like Antarctica needs to be cold to make sure it keeps the ice caps and animals alive and not melted. The weather has got increasingly worse such as droughts storms and severe heat.
