Monday 11th March 2021.

Dear Mrs Morgan,

I accept the vast opportunity to urge you about climate change. The rapid waves is affecting the entire planet! Causing panic of the predicted world in many years to come.

Above all else, This is causing habitat lost (which should be taken seriously as over 250 species are dying out each day.) Including the icecaps melting in inner, Antarctica which polar bears and Penguins are facing. The Amazon rainforest is losing 17% of habitat lost rounded up altogether.

Secondly, The fossil fuels are highly increasing making our world a smoky, waste land. But these gases are caused by humans. These gases are harmful and can decrease our health and make our morals deteriorate.

Global warming is a ~~major~~ challenging pandemic. It can not survive alone. If you were to use your voice and convince people, our world will be a better place! Time is ticking.
