Monday 11th March 2016

Dear Mrs Morgan,

I am writing to you now, because global warming (climate change) is getting worse. Climate change is becoming a crisis things like: deforestation, plastic pollution in the seas, harmful gases (air pollution), ice caps are melting and natural disasters. These are just some things that are bad for our planet.

If we do not start acting quick, then we will suffer: flood, so we will not have our homes. These are a few things you might not know, the Earth has increased by one degree above pre-industrial levels. Although this does not seem like a lot, it makes a massive difference. Also polar animals are losing their homes; they are melting at a rate that is estimated to be 9% per. 26 animals are dying a day they are just some things. We need to take action before it is too late.

Your public voice matters. After reading this letter I hope you will put climate change further forward. If you were to act what would you do?

yours sincerely
