Monday 11th March 2024

Dear Mrs Mason,

I am writing to inform you about the following: extreme weather, desertification and pollution. The earth has changed many times before over billions of years but never before has it had to cope with the human activity it is facing now. Polar animals are losing their habitats and they are melting at an alarming rate of what is estimated to be 9% per decade.

Science is telling us that global warming is occurring, so if we don't act now it will be too late. So please can you tell your followers about climate change. If you choose to you can speak to other leaders but we cannot.

1.5 percent of the amazon rainforest is disappearing every decade. Big cities has so much smog that some people get diseases. These are just three things of many things occurring. Even though part is small we can still do a little ~~bit~~ amount to make an impact.

I eagerly await your response.

Yours sincerely
