Dear Mrs Morgan,

I would like to inform you about the increasing climate change. The rapid changes to our climates which are threatening people and other exotic wildlife out there; We need to work together to find solutions to this deep concern. Science is telling us global warming is occurring while weather fluctuates on a day to day bases. Global warming refers to the overall trend of climate and it is increasing high temperatures, loss of habitat and more harmful gases; we need to stop this.

I wish to express my concerns of a challenging existence of our lives. Global warming is rising now warmer since 1880. Animals have been through many hard days because over 250 species have been taken over a year. Rainforests population of trees and moving creatures have decreased and 17% of trees have been lost in the tropical Amazon.

Firstly, the thick ice beds where polar bears live. Instead of having thick ice bergs they have little thin sheets of ice they try balance on. Now they are dying. If you were one of the people who are endangering the little cute polar bears what would you do?

Secondly, the higher temperatures are causing harsher droughts which does not help the habitat loss and soil. 9% a decade

is melting away. Around the Earth there are gases getting trapped in the Earth's atmosphere the gases is also named green house effect which is very harmful to plants and it causes heat. More thing is causing heat which is fossil fuels people have been using fossil fuels for over 150 years. These gases harm our emotions and health.

In order to use your public voice you should tell people to decrease energy, water, plant plants, take your lunch in plastic containers, repair do not chuck, ride your bike, recycle, unplug electronics and walk.

Help every one else with your voice I eagerly await your response and urge you to take action now: time is ticking.
