Dear Mrs H. Morgan

I am writing to persuade you to take action to the rapid changes happening to our Earth. The crisis of climate change is causing: increasing rainfall, harsher droughts, extreme seasons and more extreme and unpredictable weather. A big part of climate change is greenhouse gases which is when gas goes into our atmosphere and gets trapped and makes our planet too hot. Polar animals are losing their habitats as they are melting at a rate of what is estimated to be 9% a decade.

To help stop global warming we can: turn off lights, car-pool, take shorter showers, plant flowers, take lunch in reusable containers, repair don't replace, ride a bike, recycle, unplug devices and walk. If you were to do all those ways to help and encourage everyone else the world will be a better place. I would like you to use your public voice and help. I eagerly wait for your reply.

Yours sincerely
